

Dear Valued Supplier,

I am pleased to inform you that following an internal reorganisation, beginning 1 March 2017 the technology brands EMC Technology, Hypertac, IDI, Lorch, Millitech, RF Labs, TECOM and TRAK will begin transitioning to using the single brand name "Smiths Interconnect."

The technology brands will retain a level of visibility in the new branding architecture during the transition, building upon their existing foundations in the marketplace. However, as these brands have grown within Smiths Interconnect, our market, customer and technology interactions have converged to the point where we enhance our product offering, expertise and technology partnerships by working together under one name.

The rebranding simplifies our identity and builds a combined value of our capabilities into a comprehensive solutions provider capable of serving multiple applications for a single customer.

It simplifies interaction with customers through streamlined points of contact across the business. Furthermore, it enables increased expertise and knowledge sharing, facilitating innovation and technology partnerships.

Please be assured, that you will continue working with the same team.

Also, please note that our legal entities will not change until further notice. The new branding architecture will align with future modifications to the legal structure to enable a more simplified supplier experience. However, no imminent modifications are planned that affect your business therefore, all legal documents should be addressed as they are currently.

We at Smiths Interconnect look forward to continuing our relationship with you and to continuing a mutually beneficial partnership.

For more information please visit <http://smithsinterconnect.com/faq> or ask to your usual contact within our organization.

Best regards,
